

BIG ISLAND VOLCANO

"This is where the Hawaiian Islands are still being shaped, where the material of the earth still flows from the molten depths."

Continuously erupting since 1983, Hawaii's Kilauea volcano is among the most spectacular natural phenomena on earth. Here, tremendous pressures deep beneath the ocean floor force molten lava more than 35 miles to the surface, where it flows through a labyrinth of fissures and tubes, spilling into the blue Pacific with explosive fury.

Relax in comfort and privacy aboard your own exclusive aircraft while you explore stark volcanic landscapes, lush tropical rain forests and shimmering waterfalls cascading thousands of feet over soaring emerald sea cliffs.

Pacific Wings offers a variety of seating configurations and in-flight service options to make your Big Island volcano adventure a unique and memorable experience. Departures available at your convenience from any airport in Hawaii. See your travel agent for details.
